

JERIC L. IZON

Senior Full-Stack Engineer

Santa Rosa, Laguna, Philippines · +63 970 215 1592 · im.jericizon@gmail.com · jericizon.github.io/me

PROFESSIONAL SUMMARY

Senior Full-Stack Engineer with 10+ years of professional software engineering experience, including 10+ years specializing in Laravel/PHP and 7+ years building production applications with Vue.js/Nuxt.js.

Experienced in designing, building, optimizing, and operating SaaS platforms, backend systems, REST APIs, internal tools, dashboards, and data-driven applications. Strong backend focus across Laravel, NestJS, Node.js, MySQL/MariaDB, PostgreSQL, Redis, Docker, and AWS.

Hands-on experience owning systems from architecture and database design through implementation, testing, deployment, infrastructure, and production support. Experienced working with distributed teams and Singapore- and Australia-based companies in fully remote environments.

Strong focus on maintainable architecture, performance, security, automated testing, API design, database optimization, and reliable production delivery.

CORE ENGINEERING SKILLS

Backend & Architecture	Laravel, PHP, NestJS, Node.js, REST APIs, WebSockets, Redis, Queues, Background Jobs, API Architecture, Service-Oriented Systems
Frontend	Vue.js, Nuxt.js, JavaScript/TypeScript, React, Next.js, Tailwind CSS, HTML5, CSS3, SCSS
Databases	MySQL, MariaDB, PostgreSQL, Database Design, Schema Design, Indexing, Query Optimization, Data Modeling
Cloud & Infrastructure	AWS EC2, RDS, S3, CloudFront, Lambda, ECR, ECS, Docker, Linux, Cloudflare, DigitalOcean, Terraform
DevOps & Delivery	CI/CD, GitHub Actions, Bitbucket Pipelines, GitLab CI, Docker-based deployments, Production Releases, Infrastructure Management
Testing & Practices	TDD, PHPUnit, Vitest, Automated Testing, Code Reviews, API Testing, Debugging, Performance Optimization
Payments & Platforms	Stripe Billing, Webhook Processing, Supabase, Row-Level Security, WordPress
Other	FFmpeg, Electron.js, WebSocket Systems, Video Processing Pipelines
AI-Assisted Engineering	ChatGPT, Claude Code, Codex CLI, Gemini, OpenAI APIs, AI-assisted development and debugging workflows

PROFESSIONAL EXPERIENCE

Senior Laravel Developer

April 2024 – Present

Confidential Client — Australia · Remote

Senior engineer supporting multiple SLA-driven and greenfield projects across backend development, frontend integration, infrastructure, and production delivery.

- ▶ Design, develop, and maintain production applications using Laravel/PHP, with supporting frontend development using Vue.js, Next.js, and Gatsby.
- ▶ Own backend implementation across multiple projects, from technical design and development through deployment and production support.
- ▶ Develop and maintain REST APIs, business logic, database integrations, background processes, and administrative functionality.
- ▶ Work across multiple concurrent projects while maintaining delivery commitments and production reliability.
- ▶ Manage application infrastructure across AWS, Kinsta, and Ploi, including deployments, server configuration, troubleshooting, and operational support.
- ▶ Collaborate with distributed teams in an Australia-based remote environment, working independently across asynchronous workflows.
- ▶ Contribute to architecture decisions, code reviews, debugging, and technical problem solving across projects.

Senior Full-Stack Developer

April 2025 – December 2025

Bubio — Singapore · Remote

Focused on secure backend systems, database access control, APIs, and internal administration tooling.

- ▶ Designed and implemented REST API functionality and backend services supporting product features and internal workflows.
- ▶ Developed and maintained admin dashboard functionality and backend-driven features.
- ▶ Implemented Supabase Edge Functions for backend processing and automation.
- ▶ Designed and configured Row Level Security (RLS) policies to enforce database-level access control.
- ▶ Worked on database security, permissions, data access patterns, and backend integration.
- ▶ Collaborated with product and frontend teams in a distributed Singapore-based environment.

Senior Full-Stack Developer

January 2024 – December 2025

Imaginary Ones — Singapore · Remote

Focused on backend architecture, API development, performance, and cloud infrastructure.

- ▶ Designed and developed scalable REST APIs using NestJS and Laravel.
- ▶ Optimized database queries, backend data flows, and API processing to improve application performance and reliability.
- ▶ Built and maintained Dockerized backend services with automated CI/CD pipelines using Bitbucket.
- ▶ Designed and managed application deployments across AWS EC2, RDS, S3, Lambda, and ECR.
- ▶ Worked across backend architecture, infrastructure, debugging, and production deployment.
- ▶ Collaborated with frontend, design, and product teams within a fully remote Singapore-based environment.

Senior Full-Stack Developer

April 2018 – December 2025

OFFEO — Singapore · Remote

Owned and evolved backend architecture for a production SaaS platform involving media processing, asynchronous workloads, real-time systems, and cloud infrastructure.

- ▶ Owned and evolved the core backend architecture of a production SaaS platform.
- ▶ Designed and optimized MariaDB schemas, relational data models, indexes, and complex queries.
- ▶ Architected and maintained a distributed video rendering and export pipeline combining:
 - Node.js for rendering and preview generation
 - FFmpeg for video and audio processing
 - Laravel for job orchestration and backend workflows
 - AWS S3 for media storage
- ▶ Implemented asynchronous processing using queues and background jobs for resource-intensive workloads.
- ▶ Built real-time export progress tracking using WebSockets and Redis.
- ▶ Developed backend services supporting Nuxt.js dashboards and user-facing applications.
- ▶ Built and maintained Electron.js desktop applications for Windows and macOS.
- ▶ Automated application deployments and managed production infrastructure across AWS and Ubuntu servers.
- ▶ Investigated production issues, optimized backend performance, and improved system reliability.
- ▶ Performed code reviews and provided technical guidance and mentoring to other developers.

Senior Developer / Team Lead

January 2016 – January 2018

Skubbs Inc. — Philippines

- ▶ Led development of custom web applications, dashboards, and e-commerce platforms.
- ▶ Designed application architecture and deployment strategies for multiple client projects.
- ▶ Translated business requirements and UI/UX designs into production web applications.
- ▶ Gathered requirements, defined project scope, and communicated technical solutions with clients.
- ▶ Managed multiple projects simultaneously while coordinating development priorities.
- ▶ Delegated development tasks and mentored junior developers.
- ▶ Managed cloud deployments, production releases, troubleshooting, and application maintenance.

Web Developer

May 2014 – January 2016

Open Access BPO — Philippines

- ▶ Developed and maintained WordPress-based internal and corporate web platforms.
- ▶ Developed custom WordPress themes and plugins.
- ▶ Worked directly with the CTO on web platform development and technical improvements.
- ▶ Managed website content, maintenance, and performance optimization.

Web Developer

November 2013 – April 2014

AGR Operations — Manila, Philippines

- ▶ Converted Photoshop designs into responsive HTML/CSS websites.
- ▶ Developed and maintained client-facing websites and web interfaces.

SELECTED PROJECTS

ExpresswayPH expresswayph.com

Independent Product · Founder & Lead Developer

Production web platform for Philippine expressway travelers with route calculation and real-time toll estimation.

- ▶ Independently designed, built, deployed, and operate a mobile-first Nuxt.js application with custom toll-matrix computation logic.
- ▶ Built features including toll-fee information, route planning, fuel-cost calculations, expressway updates, and sharing functionality.
- ▶ Designed offline-friendly data structures and decoupled JSON feeds so toll rates update instantly without redeploying.
- ▶ Delivered high-performance static edge distribution via Cloudflare with zero-downtime deploys and global caching.
- ▶ **Reached 10,000+ active users over a 15-day holiday travel surge** while maintaining 99.9% uptime; operate the product independently including infrastructure, analytics, and monetization.

LunchOnline lunchonline.us

B2B Lunch & Catering Platform

Multi-tenant enterprise platform connecting corporate teams, meal allowances, and food preparation workflows.

- ▶ Built using Nuxt 4, NestJS, PostgreSQL, Sequelize, Stripe, and Tailwind CSS.
- ▶ Designed backend APIs and business workflows for wallets, loyalty, user roles, and food-service operations across multi-tenant corporate accounts.
- ▶ Implemented idempotent Stripe billing webhooks so retried payment events never double-charge a corporate wallet.
- ▶ Automated daily order cutoffs, provider aggregation, and reconciliation jobs producing consolidated, auditable monthly billing per corporate account.
- ▶ Worked with AWS infrastructure, Docker, PostgreSQL, and production deployment workflows.

AlagaNow alaganow.pages.dev

Pet Service Booking Platform

Dual-sided marketplace connecting pet owners with verified providers for grooming, boarding, consultations, and vaccinations.

- ▶ Designed the platform architecture for connecting pet owners with service providers, built on Node/NestJS, Nuxt.js, PostgreSQL, and API-driven services.
- ▶ Designed workflows for real-time scheduling with timezone-aware conflict avoidance, preventing double-bookings across providers, services, and time windows.
- ▶ Built automated vaccination reminder pipelines, dedicated provider portals, and an asynchronous notification queue for booking updates.
- ▶ **Facilitated 10,000+ care sessions** and reduced provider scheduling overhead by 90%.

Better Santa Rosa

Civic Transparency Platform

Open-access civic data portal making municipal budgets, public information, and project records searchable and understandable.

- ▶ Built a high-density data and search portal with Nuxt static generation, TypeScript, and Tailwind CSS, aggregating municipal records into structured, searchable schemas.
- ▶ Added Schema.org JSON-LD structured data so civic records are indexable and discoverable through natural search.
- ▶ Designed an accessible, high-contrast, non-partisan interface for a diverse civic demographic on low-end devices and weak networks.
